Expected Keywords for Relevance Scoring

data, decision, campaign, customer segments, SQL, Python, analysis, conversion, targeting, insights

Tool Results

Tool	Findings
Filler-Word Detector	0 filler words detected – clear, concise language.
STAR Structure Check	Present: **Task**, **Result**. Missing: **Situation**, **Action**.
Relevance Score	**100/100** – all expected keywords matched.

Concise Feedback

- **Strengths:** Your answer is fully relevant, uses the right technical terms, and contains no filler language. The result is quantified and shows impact.
- **Improvement Area:** To hit a complete STAR format, explicitly set the **Situation** (e.g., “Our marketing team was launching a new email campaign…”) and detail the **Action** you personally took (e.g., “I wrote SQL queries, built a Python model, and presented the findings to stakeholders”). Adding these will make the story more structured and memorable.

Live Scorecard

Question	Releva
Tell me about a time you improved a process.	55
Describe a challenging project you worked on.	80
Tell me about a time you resolved a conflict.	40
Describe a situation where you used data to make a decision.	100

What's my weakest area so far?

Ask Coach

Your Weakest Area (so far)

The question that scored the lowest is **"Tell me about a time you resolved a conflict."** – it received a relevance score of **40 / 100**, the lowest of all four answers.

Why this answer is the weakest

Dimension	What the tools found	What that tells us
Relevance keywords	Matched only 4 of the 10 target words (conflict, KPI, collaboration, listening). Missing key terms such as *resolution, communication, alignment, stakeholder, mediation, outcome*.	The story doesn't fully convey the core skills interviewers look for in conflict-resolution scenarios.
STAR structure	Situation **missing**, Action **missing**. Only Task and Result were present.	Without a clear context (Situation) and concrete steps you took (Action), the narrative feels vague and makes it hard for the listener to picture your role.
Filler words	None detected – that's a strength.	You speak clearly; the issue is content, not delivery.

What this reveals about your overall interview performance

- **Consistent gaps in the "Situation" and "Action" components** – three of the four answers omitted a full Situation, and three omitted a clear Action.
- **Keyword coverage** – you're doing well on technical terms (SQL, Python, automation, etc.) but sometimes forget the softer-skill vocabulary (e.g., *mediation, alignment, stakeholder*).

- **Strengths** – you avoid filler words and you can articulate results and technical details convincingly.

How to turn this weakness into a strength

1. Build a complete STAR story for conflict-resolution

STAR	How to phrase it (example)
Situation	"At **XYZ Corp**, the campaign and analytics teams were at odds over how to measure campaign success. The disagreement threatened the launch schedule and could have delayed revenue by **$200K**."
Task	"I was asked to **mediate** and create a unified measurement framework that satisfied both teams."
Action	"I **organized** a joint workshop, **mapped** each team's metric requirements, **facilitated** a negotiation to prioritize the most business-critical KPIs, and **drafted** a shared KPI document. I also **set up** a single reporting dashboard and **communicated** the new definitions to all stakeholders."
Result	"The teams adopted the new KPI set within two weeks, eliminating duplicate reporting, cutting the reporting cycle from 5 days to 1 day, and improving stakeholder confidence—evidenced by a **15%** increase in on-time campaign launches."

Tip: Sprinkle the missing keywords naturally: **resolution**, **communication**, **alignment**, **stakeholder**, **mediation**, **outcome**.

2. Practice the "Situation + Action" habit

- **Before you answer**, pause and ask yourself: *What was the context? Who was affected?* Write a one-sentence hook.
- **During the answer**, after stating the task, immediately follow with *"I took action by…"* and list 2-3 concrete steps you personally performed.

3. Mirror the language the evaluator expects

When you hear words like *conflict, resolution, stakeholder, alignment* in the question, make sure to echo them in your response. This boosts the relevance score automatically.

4. Quantify wherever possible

Even in soft-skill stories, add numbers: *"Reduced meeting time by 30%," "Aligned 3 teams representing 25 people," "Saved $10K in re-work."* Quantification reinforces impact and makes the Result memorable.

5. Quick self-check checklist (keep it on a sticky note)

- [ ] Situation: Who, what, why does it matter?
- [ ] Task: My responsibility.
- [ ] Action: **I** did … (list 2-3 verbs).
- [ ] Result: Outcome + metric + learning.
- [ ] Keywords: Did I use the key terms from the job description?

Encouragement & Next Steps

You already demonstrate strong technical chops and clear communication (no filler words!). The main growth area is **storytelling structure**—especially setting the scene and detailing your personal actions. By tightening those two pieces and weaving in the expected soft-skill vocabulary, you'll lift both your relevance scores and the impression you make on interviewers.

Action plan for the next practice round:

1. Rewrite the conflict-resolution answer using the full STAR template above.
2. Record yourself (30-45 seconds) and listen for any missing Situation or Action cues.
3. Swap the revised answer with a peer or mentor and ask them to rate the relevance keywords—they'll quickly spot any missing terms.

You've got the technical foundation; now it's just a matter of polishing the narrative. Keep practicing, and you'll see those scores climb! 🚀
